Notes

1. The table is based on the phonetic values of Classical and East Armenian. The variant phonetic values of West Armenian are included in brackets but are intended solely for use in preparing references from West Armenian forms of name when this may be desirable.
2. This value is used only when the letter is in initial position of a name and followed by a vowel, in Classical orthography.
3. The soft sign (prime) is placed between the two letters representing two different sounds when the combination might otherwise be read as a digraph (e.g., Ղզնունի *D'znuni*).
4. This value is used only when the letter is in initial position of a word or of a stem in a compound, in Classical orthography.
5. Romanization for letters in Classical orthography, sometimes appears as ևւ.
6. Romanization for letters in Reformed orthography, sometimes appears as և.
